Thomas Brennan-Marquez

Patient Health Summary, generated on Nov. 03, 2021

Patient Demographics - Male; born Nov. 19, 1955

Patient Address	Communication	Language	Race / Ethnicity	Marital Status
409 E Bellefonte Ave ALEXANDRIA, VA 22301	650-815-1056 (Home) 650-815-1056 (Work) 650-815-1056 (Mobile) 650-815-1056 (Work) quadrabyte@protonmail.com	English (Preferred)	White / Not Hispanic or Latino	Married

Note from Stanford Health Care and University Healthcare Alliance

This document contains information that was shared with Thomas Brennan-Marquez. It may not contain the entire record from Stanford Health Care and University Healthcare Alliance.

Allergies

Pravastatin (Other (Specify with Comments)) - Low Severity

Medications

tadalafil (CIALIS) 5 mg oral tablet (Started 1/2/2020)
take 1 Tab (5 mg total) by mouth every day

buPROPion (Wellbutrin XL) 300 mg TB24 (Started 6/15/2020)
take 1 Tab (300 mg total) by mouth every day

DULoxetine (Cymbalta) 60 mg CPDR (Started 6/15/2020)
take 1 Cap (60 mg total) by mouth every day

omeprazole (PRILOSEC) 40 mg delayed release capsule (Started 8/20/2020)
TAKE ONE CAPSULE BY MOUTH ONE TIME DAILY

ketoconazole (Nizoral) 2 % shampoo (Started 7/1/2020)

simvastatin (Zocor) 40 mg tablet (Started 11/5/2020)
take 1 Tab (40 mg total) by mouth every bedtime

levothyroxine (Synthroid) 25 mcg tablet (Started 12/22/2020)
TAKE ONE TABLET BY MOUTH IN THE MORNING BEFORE BREAKFAST

Active Problems

Alcoholic intoxication with complication (Noted 4/12/2018)

Depression, major

Diverticulosis of large intestine without hemorrhage (Noted 7/29/2016)

Hypothyroidism (Noted 4/15/2016)

Melanoma (CMS-HCC), stage 1, left leg, 2016, followed by Dr. Railan (Noted 10/6/2017)

Seasonal allergic rhinitis (Noted 4/14/2009)

Subdural hematoma, post-traumatic (CMS-HCC), 4/12/2018 (Noted 4/12/2018)

Testicular mass (Noted 9/5/2020)

Tubular adenoma of colon, 7/2016, Dr. Mary Chan (colonoscopy 9/2020, repeat 2025) (Noted 10/6/2017)

Resolved Problems

Anemia (Noted 4/13/2009)

Depressive disorder (Noted 4/14/2009)

Hyperlipidemia (Noted 7/26/2017)

Special screening for malignant neoplasms, colon (Noted 7/29/2016)

Tingling (Noted 5/12/2005)

Immunizations

Flu vaccine (IIV4), preservative-free (Given 10/6/2020, 12/5/2018, 10/6/2017, 11/10/2014)
Flu vaccine 3yr+ TRI (PF) (Given 1/21/2014)
Flu vaccine, unspecified formulation (Given 10/1/2019)
Hep A, adult (Given 3/12/2003, 6/19/2002)
Hep B, adult (Given 3/12/2003, 8/9/2002, 6/19/2002)
PPD (Given 10/1/2012)
Td (> 7 yrs) (Given 8/31/2018, 6/19/2002)
Tdap (> 7 yrs) (Given 1/7/2020, 3/11/2008)
Typhoid, ViCPs (Typhim Vi) (Given 12/5/2018)
Zoster, live (Zostavax) (Given 4/15/2016)
Zoster, recombinant (Shingrix) (Given 9/4/2020)

Procedures

COLONOSCOPY WITH OR WITHOUT BRUSHING (Performed 9/17/2020)
Performed for Encounter for screening colonoscopy
Long-Term Cardiac Rhythm Monitor (Performed 4/13/2018)
Performed for Subdural hematoma, post-traumatic (CMS-HCC), 4/12/2018
Echo - Transthoracic Echo +Doppler (Performed 4/12/2018)
ECG 12-Lead (Performed 4/12/2018)
ECG 12-Lead (Performed 4/12/2018)
Long-Term Cardiac Rhythm Monitor (Performed 3/1/2018)
Performed for Hyperlipidemia, unspecified hyperlipidemia type
ECG 12-Lead (Performed 3/1/2018)
Performed for Hyperlipidemia, unspecified hyperlipidemia type
ECG 12-Lead (Performed 11/10/2014)
Performed for Palpitations
ECHO - ADULT (Performed 1/5/2011)

Results

LDH Total, Serum / Plasma (LDH TOTAL, SERUM / PLASMA) - Final result (10/19/2020 2:37 PM PDT)

Component	Value	Ref Range	Performed At	Pathologist Signature
LDH, Total, Ser/Plas	181	135 - 225 U/L	STANFORD HOSPITAL LABORATORY	

Specimen
Blood - Blood specimen (specimen)

Performing Organization	Address	City/State/ZIP Code	Phone Number
SHC LAB - HOSPITAL LABORATORY	300 Pasteur Drive	STANFORD, CA 94305	877-717-3733
STANFORD HOSPITAL LABORATORY	300 Pasteur Drive	STANFORD, CA 94305	877-717-3733

Beta hCG, Quant (BETA HCG, QUANT) - Final result (10/19/2020 2:37 PM PDT)

Component	Value	Ref Range	Performed At	Pathologist Signature
Beta HCG	<1 Comment: Clinical consideration: Biotin has been identified by the manufacturer as a potential interfering substance. Higher concentrations of biotin may be found in multivitamins, hair/nail supplements, and workout supplements. If the result does not match clinical observations and patient is taking a supplement containing biotin, repeat testing after patient refrains from the use of supplements for at least 12 hours. Reference Range:	<5 mIU/mL	STANFORD HOSPITAL LABORATORY	

Non-pregnant females: <= 5.0 mIU/mL
Equivocal (Recommend repeat testing in 48-72 hrs): 6.0-10.0 mIU/mL

Healthy non-pregnancy perimenopausal and postmenopausal females may have hCG values up to <=8 mIU/mL.

The following hCG values were determined during pregnancy (completed weeks of pregnancy from the first day of the last menstruation cycle):

Week of Gestation	HCG mIU/mL Median (5-95th Percentile)
3	17.5 (5.8-71.2)
4	141 (9.5-750)
5	1398 (217-7138)
6	3339 (158-31795)
7	39759 (3697-163563)
8	90084 (32065-149571)
9	106257 (63803-151410)
10	85172 (46509-186977)
12	66676 (27832-210612)
14	34440 (13950-62530)
15	28962 (12039-70971)
16	23930 (9040-56451)
17	20860 (8175-55868)
18	19817 (8099-58176)

Please interpret the results in a clinical context. Repeating test within 2-3 days may be of value and provide a more definitive answer.

This test is for the determination of pregnancy and should not be used for cancer patients.

Metabolic Panel, Comprehensive (METABOLIC PANEL, COMPREHENSIVE) - Final result (10/02/2020 8:41 AM PDT)

Component	Value	Ref Range	Performed At	Pathologist Signature
Sodium, Ser/Plas	142	135 - 145 mmol/L	STANFORD HOSPITAL LABORATORY	
Potassium, Ser/Plas	4.4	3.5 - 5.5 mmol/L	STANFORD HOSPITAL LABORATORY	
Chloride, Ser/Plas	107	98 - 107 mmol/L	STANFORD HOSPITAL LABORATORY	
CO2, Ser/Plas	26	22 - 29 mmol/L	STANFORD HOSPITAL LABORATORY	
Anion Gap	9	5 - 15 mmol/L	STANFORD HOSPITAL LABORATORY	
Fasting	Yes		STANFORD HOSPITAL LABORATORY	
Glucose, Ser/Plas	115 Comment: The reference range listed above is for a fasting patient. Non-fasting glucose values may be higher.	70 - 100 mg/dL	STANFORD HOSPITAL LABORATORY	
Creatinine, Ser/Plas	0.80 Comment: Measured by isotope dilution mass spectrometry traceable method. Result can be falsely decreased in patients with elevated levels of N-Acetylcysteine (NAC) and Metamizole.	0.67 - 1.17 mg/dL	STANFORD HOSPITAL LABORATORY	
eGFR	94 Comment: eGFR is consistent with normal renal function. This eGFR is calculated for Non-African American patients. All estimates of GFR based on plasma/serum creatinine will be less accurate for patients with UNSTABLE CREATININE CONCENTRATIONS, at the extremes of body size or muscle mass, those with unusual diets, and those with conditions associated with reduced secretion or extrarenal elimination of creatinine.	>60 mL/min/1.73 m2	STANFORD HOSPITAL LABORATORY	
eGFR for African American	109 Comment: eGFR is consistent with normal renal function. All estimates of GFR based on plasma/serum creatinine will be less accurate for patients with UNSTABLE CREATININE CONCENTRATIONS, at the extremes of body size or muscle mass, those with unusual diets, and those with conditions associated with reduced secretion or extrarenal elimination of creatinine.	>60 mL/min/1.73 m2	STANFORD HOSPITAL LABORATORY	
BUN, Ser/Plas	18	8 - 23 mg/dL	STANFORD HOSPITAL LABORATORY	
Calcium, Ser/Plas	9.6	8.4 - 10.2 mg/dL	STANFORD HOSPITAL	

			LABORATORY
Protein, Total, Ser/Plas	6.5	6.0 - 8.3 g/dL	STANFORD HOSPITAL LABORATORY
Albumin, Ser/Plas	4.6	3.5 - 5.2 g/dL	STANFORD HOSPITAL LABORATORY
Total Bilirubin, Ser/Plas	0.7	<1.2 mg/dL	STANFORD HOSPITAL LABORATORY
Alk P'TASE, Total, Ser/Plas	52	40 - 130 U/L	STANFORD HOSPITAL LABORATORY
AST (SGOT), Ser/Plas	21	10 - 50 U/L	STANFORD HOSPITAL LABORATORY
ALT (SGPT), Ser/Plas	20	10 - 50 U/L	STANFORD HOSPITAL LABORATORY
Globulin	1.9	2.0 - 5.0 g/dL	STANFORD HOSPITAL LABORATORY

Specimen

Blood - Blood specimen (specimen)

Narrative	Performed At
Physiological plasma concentrations of Sulfasalazine and/or Sulfapyridine drugs may lead to false results for AST and ALT. Please contact the Chemistry section of the clinical laboratory for any questions.	STANFORD HOSPITAL LABORATORY

Performing Organization	Address	City/State/ZIP Code	Phone Number

Lipid Panel with Calculated LDL (LIPID PANEL WITH CALCULATED LDL) - Final result (10/02/2020 8:41 AM PDT)

Component	Value	Ref Range	Performed At	Pathologist Signature
Cholesterol, Total, Ser/Plas	225 Comment: Result can be falsely decreased in patients with elevated levels of N-Acetylcysteine (NAC) and Metamizole.	<200 mg/dL	STANFORD HOSPITAL LABORATORY	
Triglyceride, Ser/Plas	223 Comment: Result can be falsely decreased in patients with elevated levels of N-Acetylcysteine (NAC) and Metamizole.	<150 mg/dL	STANFORD HOSPITAL LABORATORY	
HDL Cholesterol	39 Comment: Result can be falsely decreased in patients with elevated levels of N-Acetylcysteine (NAC) and Metamizole.	>40 mg/dL	STANFORD HOSPITAL LABORATORY	
LDL (Calculated-Friedewald)	141 Comment: Patients with coronary heart disease or diabetes should target <100 mg/dl (or lower) as desirable level. Triglyceride > 200 mg/dL may decrease LDL-C result.	<130 mg/dL	STANFORD HOSPITAL LABORATORY	
Cholesterol/HDL Ratio	5.8	<5.0 ratio	STANFORD HOSPITAL LABORATORY	
Non-HDL Chol, Calc	186	<160 mg/dL	STANFORD HOSPITAL LABORATORY	

LDL/HDL Ratio	3.7	<3.0 ratio	STANFORD HOSPITAL LABORATORY
LDL Calculated (NIH)	145 Comment: Patients with coronary heart disease or diabetes should target <100 mg/dl (or lower) as desirable level.	<130 mg/dL	STANFORD HOSPITAL LABORATORY

Specimen

US SCROTUM - Final result (09/22/2020 1:12 PM PDT)

Specimen

Impressions	Performed At
IMPRESSION: 1. Slightly increased size of a 1.2 cm left extra-testicular mass compared to ultrasound from 2012. This is favored to represent an adenomatoid tumor vs lipoma. Urology consultation is recommended for further management. 2. Small bilateral hydroceles. I have personally reviewed the images for this examination and agree with the report transcribed above. Signed"Final report"	RADIOLOGY

Narrative	Performed At
SCROTAL ULTRASOUND: 9/22/2020 12:35 CLINICAL HISTORY: 64 years of age, Male, chickpea size well circumscribed nodule in left scrotum. COMPARISON: Prior scrotal ultrasound 10/3/2012. PROCEDURE COMMENTS: Multiple transverse and sagittal grayscale, color, and spectral Doppler sonographic images of the scrotum were obtained. FINDINGS: Right scrotum:	RADIOLOGY

Testis measurements: 3.9 x 1.8 x 3.1 cm.
Testis appearance: Normal. No intratesticular masses.
Color and spectral Doppler tracings: Normal.
Epididymis: Normal.
Other: Small right hydrocele.

Left scrotum:
Testis measurements: 3.6 x 1.5 x 3.1 cm.
Testis appearance: Normal. No intratesticular masses.
Color and spectral Doppler tracings: Normal.
Epididymis: Normal.
Other: Extra-testicular echogenic mass, abutting but separate from the left epididymis, centered within the anteromedial wall of the left hemiscrotum, and measuring 1.2 x 1.3 x 0.8. The mass is fairly homogeneously echogenic with mild internal Doppler flow. Small left hydrocele and a 3 mm cyst is noted within the left epididymal tail. In retrospect, this was visible on 2012 scrotal ultrasound where it measured 1.1 x 0.9 x 0.5 cm.

Procedure Note

Shc, In-Radiant Results Multiple Systems - 09/22/2020 1:54 PM PDT

Formatting of this note might be different from the original.

RADIOLOGY			

COLONOSCOPY DIAGNOSTIC - Final result (09/17/2020 12:15 PM PDT)

Specimen

Impressions	Performed At

Patient Name: Brennan-marquez , Thomas PROVATION ENDO LAB
Procedure Date: 9/17/2020 12:15 PM
MRN: 13776042
Account #: 131291570123
Date of Birth: 11/19/1955
Admit Type: Outpatient
Note Status: Finalized
Attending MD: Atulkumar Shah ,
Procedure: Colonoscopy
Indications: Surveillance: Personal history of adenomatous polyps on last colonoscopy 5 years ago
Providers: Atulkumar Shah
Referring MD: Amelia L. Sattler, MD (Referring MD)
Medicines: Monitored Anesthesia Care
Complications: No immediate complications.
Procedure:
Pre-Anesthesia Assessment:
- Prior to the procedure, a History and Physical was performed, and patient medications and allergies were reviewed. The patient's tolerance of previous anesthesia was also reviewed. The risks and benefits of the procedure and the sedation options and risks were discussed with the patient. All questions were answered, and informed consent was obtained. Prior Anticoagulants: The patient has taken no previous anticoagulant or antiplatelet agents. ASA Grade Assessment: II - A patient with mild systemic disease. After reviewing the risks and benefits, the patient was deemed in satisfactory condition to undergo the procedure.
- ASA Grade Assessment: II - A patient with mild systemic disease. After obtaining informed consent, the scope was passed under direct vision. Throughout the procedure, the patient's blood pressure, pulse, and oxygen saturations were monitored continuously. The PCF-H190DL-2839167 was introduced through the anus and advanced to the cecum, identified by appendiceal orifice and ileocecal valve. The ileocecal valve, appendiceal orifice, and rectum were photographed. The colonoscopy was performed without difficulty. The patient tolerated the procedure well. The quality of the bowel preparation was evaluated using the BBPS (Boston Bowel Preparation Scale) with scores of: Right Colon = 3, Transverse Colon = 3 and Left Colon = 3 (entire mucosa seen well with no residual staining, small fragments of stool or opaque liquid). The total BBPS score equals 9.
Findings:
A few small-mouthed diverticula were found in the sigmoid colon and descending colon.
Impression: - Diverticulosis in the sigmoid colon and in the descending colon.
- No specimens collected.
Recommendation: - Patient has a contact number available for emergencies. The signs and symptoms of potential delayed complications were discussed with the patient. Return to normal activities tomorrow. Written discharge instructions were provided to the patient.
- Resume previous diet.
- Continue present medications.
- Repeat colonoscopy in 10 years for surveillance.
- Return to my office PRN.
Attending Participation:
I personally performed the entire procedure.
Atulkumar Shah,

2019 Novel Coronavirus (SARS-CoV-2) (NOVEL CORONAVIRUS 2019 (SARS-COV-2), RT PCR) - Final result (09/15/2020 12:13 PM PDT)

Component	Value	Ref Range	Performed At	Pathologist Signature
SPECIMEN TYPE	Resp, Upper		HILLVIEW LABORATORY	
SPECIMEN SOURCE	Nasopharyngeal Swab		HILLVIEW LABORATORY	
SARS-CoV-2 RNA	Not Detected Comment: TEST PARAMETERS AND METHODOLOGY Methodology: Nucleic Acid	Not Detected	HILLVIEW LABORATORY	

Amplification (NAA)

This test is authorized by the U.S. Food and Drug Administration (FDA) under an Emergency Use Authorization (EUA) for use by laboratories certified under the Clinical Laboratory Improvement Amendments (CLIA) to perform high complexity tests.

Validated specimen types: Nasopharyngeal (NP), Nasal and Oropharyngeal (OP) swab specimens. Sensitivity and Specificity are unknown for other specimen types and collection techniques.

Specimen

Resp, Upper - Nasopharyngeal swab (specimen)

Celiac Disease Screen (CELIAC DISEASE SCREEN) - Final result (01/07/2020 10:34 AM PST)

Component	Value	Ref Range	Performed At	Pathologist Signature
IgA Anti TTG Antibody	Negative	Negative	HILLVIEW LABORATORY	
IgA Anti TTG Level	<1.0	<8.0 U/mL	HILLVIEW LABORATORY	
Interpretation	Comment: Screening for IgA antibody to tissue transglutaminase (TTG) is performed using fluoroenzymeimmunoassay. This specimen was negative, consistent with a level of <8 U/mL.		HILLVIEW LABORATORY	
IgG Anti DGP Antibody	Negative	Negative	HILLVIEW LABORATORY	
IgG Anti DGP Level	<1.0	<8.0 U/mL	HILLVIEW LABORATORY	
Interpretation	Comment: Screening for IgG antibody to deamidated gliadin (DGP) is performed using fluoroenzymeimmunoassay. This specimen was negative, consistent with a level of <8 U/mL.		HILLVIEW LABORATORY	
IgA, Serum	49	68 - 408 mg/dL	HILLVIEW LABORATORY	
Interpretation	Comment: Laboratory support for the diagnosis of celiac disease includes testing for IgA anti-tissue transglutaminase antibody, as well as for IgG antibodies to deamidated gliadin peptides. Both tests are highly sensitive and specific, and the negative results make the diagnosis of celiac disease very unlikely. (Selective IgA deficiency has also been ruled out, based on the detectable plasma IgA.)		HILLVIEW LABORATORY

Long-Term Cardiac Rhythm Monitor (CARDIAC PATCH RHYTHM MONITOR) - Final result (04/13/2018 4:15 PM PDT)

Narrative

Performed At: TRACEMASTER VU LAB

This result has an attachment that is not available.
Koch, Francis Henry, MD 8/24/2018 4:42 PM
Cardiology Laboratory
Stanford Health Care Name: Thomas Brennan-Marquez Age: 62 Y
MRN: 13776042 DOB: 11/19/1955
Study Date: 04132018

Cardiac Monitor Report
Reason for Study: Palpitations
Type of cardiac monitor: Zio Patch
Interpretation Summary

1. Recording quality: Good
2. Underlying rhythm is: Sinus
3. There were No pauses.
4. PACs were absent/rare (<1/hr)

There were No episodes of SVT.

5. Atrial fibrillation and/or flutter was not present.
6. PVCs were: absent/rare (<1/hr)
There Was One episodes of VT . This Lasted 5 Beats With A Maximal Rate Of 250 And An Average Rate Of 184.
7. Patient triggered The Monitor 8 Times But Had No Diary Entry To Explain Why He Triggered The Monitor. ON ONE TRIGGERED EPISODE THERE WAS A BRIEF 5 BEAT RUN OF VENTRICULAR TACHYCARDIA. ON TWO TRIGGERED EPISODES THERE WAS A PAC . FOR THE OTHER 5 EPISODES , NSR HR 60 TO 98 WITHOUT ARRHYTHMIA WAS EVIDENT. SEE PAGES 5,6,7,13.

IMPRESSION: Cardiac monitor was worn for 12 DAYS AND 9 HOURS.
Results demonstrate AS NOTED ABOVE. ONE FIVE BEAT RUN OF VENTRICULAR TACHYCARDIA OCCURRED ON ONE OF EIGHT OCCASIONS WHEN THE PATIENT TRIGGERED THE MONITOR. NO OTHER ARRHYTHMIA OF NOTE WAS DEMONSTRATED .

I have personally reviewed the results of this test and agree with the report above.

_____________________________________________________________________________________
__
Reason for Study: Syncope and collapse

_____________________________________________________________________________________
__

ICD10
ICD-10: Syncope and collapse, R55;.

Interpretation Summary
1. Normal LV size and systolic function, LVEF by MOD=58%. Borderline RV size with overall normal RV systolic
function.
2. Trace TR, RVSP = 20 mmHg (RAP = 5mmHg).
3. Compared to previous resting echo done on 01/05/2011, no significant changes.
Left Ventricle
The left ventricle is normal in size. There is normal left ventricular wall thickness. The left ventricular
ejection fraction is normal. Normal diastolic function. Doppler indices suggest normal LV filling pressure.
Right Ventricle
Borderline right ventricular enlargement. The right ventricular ejection fraction is normal.
Atria
The left atrium is normal size. The right atrium is not well visualized.
Mitral Valve
The mitral valve leaflets appear normal. There is no evidence of stenosis, fluttering, or prolapse. There is
trace mitral regurgitation.
Tricuspid Valve
The tricuspid valve leaflets are thin and pliable and the valve motion is normal. There is trace tricuspid
regurgitation.
Aortic Valve
The aortic valve is tri-leaflet. No aortic regurgitation is present.
Pulmonic Valve
The pulmonic valve is not well seen, but is grossly normal. There is trace pulmonic valvular regurgitation.
Great Vessels
The aortic root is normal. The proximal ascending aorta is normal. The pulmonary artery is not well
visualized, but is probably normal size.
Pericardium/Pleural
There is no pericardial effusion.

Troponin I (TROPONIN I) - Final result (04/12/2018 1:31 PM PDT)

Component	Value	Ref Range	Performed At	Pathologist Signature
TROPONIN I	<0.017 Comment: NEGATIVE, no detectable troponin, below the level of detection for this assay. New method and reference ranges, effective April 3, 2017. Biotin has been identified by the manufacturer as a potential interfering substance. Higher concentrations of biotin may be found in multivitamins, hair/nail supplements, and workout supplements. If the result does not match clinical observations, repeat testing after patient refrains from the use of supplements for at least 12 hours.	<0.055 ng/mL	STANFORD HOSPITAL LABORATORY

Narrative | Performed At

ULTRASOUND OF THE CAROTID ARTERIES: 4/12/2018 3:55 | RADIOLOGY

CLINICAL HISTORY: 62 years of age, Male, syncope and subdural hematoma.

COMPARISON: None available.

PROCEDURE COMMENTS: Dedicated color and spectral Doppler sonographic images of the carotid arterial systems were obtained.

FINDINGS:

The right common carotid, internal carotid and external carotid arteries are patent with no evidence of plaque.

The left common carotid, internal carotid and external carotid arteries are patent with no evidence of plaque.

Flow within the external carotid and vertebral arteries is antegrade.

CCA peak systolic velocity (cm/sec): Right: 130.3 Left: 108.4
ICA peak systolic velocity proximal (cm/sec): Right: 61.1 Left: 50.9
ICA peak systolic velocity middle (cm/sec): Right: 68.1 Left: 51.8
ICA peak systolic velocity distal (cm/sec): Right: 65.0 Left: 65.7

ICA/CCA peak systolic ratio: Right: 0.6 Left: 0.6

CT HEAD WO IV CONTRAST - Final result (04/12/2018 8:09 AM PDT)

Specimen

Impressions	Performed At
IMPRESSION: 1. No substantial change in size of right greater than left thin subdural hematomas without significant mass effect. No midline shift. 2. No substantial change in bilateral anterior temporal parenchymal hemorrhagic contusion injuries without significant mass effect. Slight redistribution of scattered subarachnoid hemorrhage adjacent to the temporal lobes. 3. Diminished foci of pneumocephalus in the left anterior cranial fossa. Redemonstration nondisplaced of the left orbital roof and fovea ethmoidalis. 4. Mild enlargement of the right posterior parietal scalp hematoma. There are no substantial differences between the preliminary results and the impressions in this final report. "Physician to Physician Radiology Consult Line: (650) 736-1173" Signed	RADIOLOGY

Narrative	Performed At
CT HEAD WITHOUT CONTRAST: 4/12/2018 7:45 CLINICAL HISTORY: 62 years of age, Male, bilateral subdural hematoma. COMPARISON: CT of the head at 1:14 AM on the same day 4/12/2018 PROCEDURE COMMENTS: CT of the head was performed without IV contrast. Dose information: Based on a 16 cm phantom, the estimated radiation dose (CTDIvol [mGy]) for each series in this exam is 49.92. The estimated cumulative dose (DLP [mGy-cm]) is 922.19. FINDINGS: Parenchyma ventricles, extra-axial spaces: Redemonstration of thin right greater than left frontal temporal and parietal convexity subdural hematomas measuring up to 3 mm on the right and 1 to 2 mm on the left. Redemonstration of bilateral temporal lobe parenchymal contusion injuries with a few hemorrhagic foci and mild adjacent edema (series 601, image 40). Slight redistribution of traumatic subarachnoid hemorrhage adjacent to the temporal lobes. Amount of hemorrhage or mass effect is not significantly changed from prior. Diminished pneumocephalus in the left anterior cranial fossa with a few foci remaining. Redemonstration of nondisplaced fractures of the left medial wall, orbital roof, and fovea ethmoidalis. Visualized paranasal sinuses: Clear. Mastoid air cells: Clear. Bones: Redemonstration of nondisplaced fractures of the left medial wall, orbital roof, and fovea ethmoidalis, better seen on prior. Additional comment: Mild enlargement of the right posterior parietal scalp hematoma. Unchanged extraconal foci of air in the left orbit adjacent to the fractures. No orbital hematoma.	RADIOLOGY

PTT Partial Thromboplastin Time (PTT PARTIAL THROMBOPLASTIN TIME) - Final result (04/12/2018 3:51 AM PDT)

Component	Value	Ref Range	Performed At	Pathologist Signature
Part. Thromboplastin Time	25.9 Comment: Note regarding heparin monitoring:	23.8 - 35.7 seconds	STANFORD HOSPITAL LABORATORY	

Traditionally, a PTT of 1.5-2.5 times control value has been used for heparin monitoring. However, heparin effects on PTT are variable between individuals and reagent/instrument combinations.

Thus, for heparin monitoring, heparin activity level (HAL) in anti-Xa U/mL is recommended. The therapeutic range for heparin therapy of venous thrombembolic disease is 0.3 - 0.7 anti-Xa U/mL (the recommended range can vary with the indication for heparin therapy - see heparin protocols for suggested ranges).

For reference, therapeutic range from 0.3 - 0.7 anti-Xa U/mL corresponds to a PTT of 78 – 121 seconds in the Stanford coagulation laboratory using a Stago STA-R automated instrument and PTT-automate reagent.
New Ref Range in use 8/1/2016

Ethanol	195	NEG (<=10 mg/dL) mg/dL	STANFORD HOSPITAL LABORATORY	
Ethanol Interp	Ethanol detected using enzymatic assay of serum or plasma. Note that we report ethanol in units of mg/dL. The "legal limit" in California is a whole blood concentration of 0.08% which corresponds to approximately 80 mg/dL. (Serum or plasma levels are		STANFORD HOSPITAL LABORATORY	

	slightly higher than whole blood.) Toxicity may vary by body type, history of alcohol use and other factors but levels >300 mg/dL should be considered critical.		
Osmolal Gap	-12 Comment: The calculated Osmolal Gap includes, if present, contribution from Ethanol.	<15 mOsm/kg	STANFORD HOSPITAL LABORATORY
Osmolal Gap Interp	Osmolal gap determined by subtracting the calculated from the measured plasma or serum osmolality. In conjunction with the ethanol result, this essentially rules out the presence of any volatile alcohols such as isopropanol, methanol or ethylene glycol.		STANFORD HOSPITAL LABORATORY

CT HEAD FACE CERVICAL SPINE WO IV CONTRAST TRAUMA - Final result (04/12/2018 1:33 AM PDT)

Specimen

Impressions	Performed At
IMPRESSION: 1. Bilateral acute subdural hematomas measuring 3 mm on the right and 1 and 2 mm on the left. Right greater than left temporal hemorrhagic contusion with mild edema and associated hemorrhage which may be parenchymal or subarachnoid in location. No midline shift. 2. Minimally displaced fractures of the left orbital roof, medial orbital wall, and possibly fovea ethmoidalis with few adjacent foci of pneumocephalus. No ocular muscle entrapment or orbital hematoma. 3. No acute fracture or traumatic subluxation of the cervical spine. 4. Bilateral pleural opacities with some associated calcifications at the left apex are partially visualized. Recommend follow up dedicated chest imaging. Preliminary findings discussed with emergency room Dr. Hornbeak by Dr. Patel at 1:33 AM 4/12/2018 with read back. Preliminary results were reviewed and minor modifications were made in this final report as follows: Chest findings discussed with Dr. Yelorda at 9:35 AM on 4/12/2018. "Physician to Physician Radiology Consult Line: (650) 736-1173" Signed	RADIOLOGY

Narrative	Performed At
CT HEAD, FACE, AND CERVICAL SPINE WITHOUT CONTRAST: 4/12/2018 0:55 CLINICAL HISTORY: 62 years of age, Male, unwitnessed fall with loss of consciousness. COMPARISON: None PROCEDURE COMMENTS: CT of the head, face, and cervical spine was performed without IV contrast. Dose information: Based on 16 cm and 32 cm phantoms, the estimated radiation dose (CTDIvol [mGy]) for each series in this exam is 0.28; 0.22; 59.8; 15.85; 29.58. The estimated cumulative dose (DLP [mGy-cm]) is 2750.	RADIOLOGY

FINDINGS:

BRAIN:

Parenchyma, ventricles and extra-axial spaces: There is an acute right frontotemporal parietal subdural hematoma measuring 3 mm in maximum transverse diameter. A thin, acute left frontoparietal subdural hematoma is also noted measuring 1-2 mm in transverse diameter. No midline shift. No herniation.

There are also bilateral temporal parenchymal contusions with some mild surrounding edema. Few foci of associated subarachnoid hemorrhage bilaterally. There is pneumocephalus seen overlying the left frontal lobe along with gas seen along the left medial rectus muscle.

Bones: No skull fracture. See below

Additional comment: None.

FACE:

Bones and orbits: There is a minimally displaced fracture of the left orbital roof (series 13, image 42). Additional fracture cortical defects in the left medial orbit superiorly (series 13, image 38) and possibly the left fovea ethmoidalis (series 13, image 36). Small foci of gas in the extraconal left orbit. No orbital hematoma. The globes are intact.

Paranasal sinuses: Clear.

Mastoid air cells: Clear.

Soft tissues: Large right posterior temporo-occipital scalp hematoma.

CERVICAL SPINE:

Alignment: Trace retrolisthesis of C4-C5 likely degenerative.

Vertebrae: Vertebral bodies and posterior elements are intact without acute fracture. There are moderate multilevel degenerative changes, most severe at C5-C6.

Extra-vertebral soft tissues: Normal.

Additional comment: None.

LUNGS: Incompletely evaluated nodular thickening of the pleura at the left greater than right lung apex with few linear calcifications.

Procedure Note

This result has an attachment that is not available. Rodriguez, Fatima, MD 3/19/2018 10:34 AM Cardiology Laboratory Stanford Health Care Name: Thomas Brennan-Marquez Age: 62 Y MRN: 13776042 DOB: 11/19/1955 Study Date: 3/3/18 Cardiac Monitor Report Reason for Study: Palpitations Type of cardiac monitor: Zio Patch Interpretation Summary 1. Recording quality: Good 2. Underlying rhythm is: Sinus 3. There were 0 pauses. 4. PACs were absent/rare (<1/hr) There were 1 episodes of SVT up to 4 beats. The fastest rate was 118bpm. SVT appeared to be: PACs 5. Atrial fibrillation and/or flutter was not present. Burden was 0 % 6. PVCs were: absent/rare (<1/hr) There were 1 episodes of VT ranging up to 4 beats with rates up to 154 bpm. 7. Patient triggered events show sinus rhythm and ectopic beats. IMPRESSION: Cardiac monitor was worn for 3 days 22 hours. Results demonstrate rare symptomatic PACs. I have personally reviewed the results of this test and agree with the report above. Outside Slide Review (OUTSIDE SLIDE REVIEW) - Final result (07/29/2016 12:00 AM PDT)

Specimen

Narrative	Performed At
Accession No: SHS-16-34829 SPECIMEN SUBMITTED: ASCENDING COLON POLYP DIAGNOSIS (MICROSCOPIC): A. COLON, ASCENDING, BIOPSY -- TUBULAR ADENOMAS (X3) GARS/GOMEZ/CARNEAL CLINICAL HISTORY: Screening colonoscopy OPERATION: Colonoscopy next item small ascending colon polyp GROSS DESCRIPTION: One specimen is received labeled with the patient's name and medical record number. The specimen labeled "ascending colon polyp" is received in formalin and consists of three pale tan fragments of tissue that measure 0.7 x 0.5 x 0.3 cm in aggregate. The specimen is entirely submitted between sponges in one cassette labeled A1. Velasquez (8/1/2016) I have reviewed the specimen and agree with the interpretation above. US SCROTUM - Final result (10/03/2012 9:52 AM PDT)

Specimen

Impressions	Performed At
IMPRESSION:	RADIOLOGY

1. NORMAL SONOGRAPHIC APPEARANCE OF THE TESTICLES.

2. LARGE PROBABLE SPERMATOCELE WITHIN THE SUPERIOR ASPECT OF THE LEFT SCROTUM, MEASURING UP TO 4.5 CM.

3. TWO SMALL LEFT EPIDIDYMAL CYSTS VERSUS SPERMATOCELES, MEASURING UP TO 3 MM.

SUMMARY:4-POSSIBLY SIGNIFICANT FINDING, MAY NEED ACTION

I have personally reviewed the images for this examination and agreed with the report transcribed above.

Narrative	Performed At
EXAM: US Scrotum 10/3/2012 9:52 AM	RADIOLOGY

CLINICAL HISTORY: Suspect left epididymal cyst. Patient has a prior history of vasectomy.

COMPARISON: None available

TECHNIQUE: Multiple transverse longitudinal grayscale images of the testicles were performed with color and spectral Doppler interrogation.

FINDINGS:

The testicles are normal in size and homogeneous in echogenicity. No intratesticular masses. The right testicle measures 3.6 x 4.2 x 2.1 cm. The left testicle measures 4.0 x 2.2 x 2.8 cm. Color and spectral Doppler tracings are normal.

The right and left epididymides are enlarged and hypoechoic with inhomogeneity, likely consistent with the expected changes of prior vasectomy. There are two small cysts within the left epididymal tail measuring up to 3 mm, compatible with epididymal cysts versus spermatoceles. There is a moderate sized cystic collection within the superior aspect of the left scrotal sac, with associated mobile echogenic debris, most suggestive of a spermatocele that measures up to approximately 4.5 cm.

RADIOLOGY			

XR ABDOMEN 1V - Final result (10/27/2011 5:05 PM PDT)

Specimen

Impressions	Performed At
IMPRESSION:	RADIOLOGY

1.NO DEFINITE STONES.

2.EXTENSIVE STOOL AND GAS IN THE COLON.

3.IF THERE IS PERSISTENT CLINICAL CONCERN FOR RENAL STONES, CT IS MORE SENSITIVE.

SUMMARY:4-POSSIBLY SIGNIFICANT FINDING, MAY NEED ACTION
I have personally reviewed the images for this examination and agreed with the report transcribed above.

Narrative	Performed At
Abdomen 1 View 10/27/2011 5:05 PM	RADIOLOGY

HISTORY: 55-year-old man with concern for renal stones.

COMPARISON: None.

FINDINGS: Frontal films of the abdomen excluding the diaphragms demonstrate no obvious mass or organomegaly. No renal stones are visualized, though the evaluation of small stones is limited by extensive superimposed bowel gas and stool in the colon. Visualized osseous structures are normal in appearance.

ECHO - ADULT - Final result (01/05/2011 3:19 PM PST)

Specimen

Narrative	Performed At
Ordered by E. JONES Interpretation Summary Rest and exercise echocardiogram. Borderline resting wall motion. No stress-induced wall motion abnormality. Moderately-high workload achieved. The global left ventricular systolic function improved after stress. 1. Bruce protocol. There was no new ST segment depression. The patient did not exhibit any symptoms during stress test. Exercise was stopped due to fatigue. 2. The left ventricle is normal in size. LV contractility is at lower limits of normal. There is mild septal hypokinesis. 3. Compared to prior resting Echo of 12/15/05, there is no significant change in LV function. Interpreting Physician: : Ingela Schnittger, MD electronically signed on 01-05-2011 19:15:57	XCELERA ECHO LAB

DEXA BONE DENSITY CENTRAL (BONE DENSITY ADULT) - Final result (05/12/2009 9:20 AM PDT)

Specimen

Narrative	Performed At
Bone Mineral Densitometry by Dual X-ray Absorptiometry (DXA) at Stanford Hospital and Clinics ICD-9 Code: v70.0 Based on history, the patient has the following risk factors for osteoporosis: Inadequate calcium intake The scan was done using an array mode on a Hologic QDR 4500 machine with APEX software. The lumbar spine and forearm are using the BMDCS/Hologic reference database. The hip is using the BMDCS/NHANES reference database. The positioning for the scan was good. Scan artifacts were not observed. There were mild degenerative changes noted in the lumbar spine	PROVATION ENDO LAB

which may give higher than expected BMD results.

Region	BMD	T-Score	Z-Score
AP Spine (L1)	0.985	-0.2	0.2
AP Spine (L2)	1.073	-0.2	0.3
AP Spine (L3)	1.040	-0.6	-0.1
AP Spine (L4)	1.020	-1.1	-0.7

Region	BMD	T-Score	Z-Score	AM%
Total AP Spine (L1-L4)	1.030	-0.6	-0.1	99.0

-- IMPRESSION: ** Normal **

Femoral Neck (Left)	0.753	-1.3	-0.5	92.0
Femoral Troch (Left)	0.771	0.0	0.3	104.0
Femoral Inter (Left)	1.131	-0.4	-0.1	98.0
Femoral Wards (Left)	0.532	-1.8	-0.4	90.0
Total Hip (Left)	0.987	-0.3	0.1	101.0

-- IMPRESSION: ** Normal **

COMPARISON RESULTS FOR PREVIOUS SCANS:
--------- [SEE CHART BELOW] ----------

The bone mineral densities of the lumbar spine and left hip have changed more than 2% from the previous study, this represents a significant change.

Previous Exams:

Region	Exam Date	Age	BMD g/cm2	T-Score	BMD Change vs Baseline	BMD Change vs Previous
AP Spine(L1-L4)						
	05/12/2009	53	1.030	-0.6	-5.1%*	-5.1%*
	02/12/2004	48	1.086	0.0		
Total Hip(Left)						
	05/12/2009	53	0.987	-0.3	-2.6%	-2.6%
	02/12/2004	48	1.014	-0.1		

* Indicates significant change

The sensitivity of the DXA technique does not permit us to state that changes of 2% or less are significant.

World Health Organization criteria for BMD interpretation classify patients as Normal (T-score at or above -1.0), Osteopenic (T-score between -1.0 and -2.5), or Osteoporotic (T-score at or below -2.5).

Osteopenic/Osteoporotic:
The risk of future fracture increases approximately two fold for each 1.0 SD decrease in T-score. However, low BMD is not the only risk factor for a future fragility fracture. Other clinical risk factors for osteoporotic fracture should be considered in ascertaining this patient's future fracture risk including the patient's age, previous osteoporotic (fragility) fracture, estrogen deficiency/hypogonadal, risk of falling, use of medications implicated in bone loss (glucocorticoids), family history of osteoporotic fracture, diseases and conditions associated with bone loss, low body weight, smoking, high bone turnover, etc. Combining low BMD and other clinical risk factors result in a more precise assessment of future fracture risk. Secondary causes for osteoporosis, such as osteomalacia, other metabolic bone disorders, and diseases and conditions that may contribute to accelerated bone loss may have to be considered depending on the clinical situation.

A repeat bone density assessment should be considered in two years.

Bone Density images are available for viewing on the Stanford Centricity PACS System. If you do not have access to PACS, please call Mary Troyer (Nuclear Medicine Administrator) at (650) 725-4711.

CT IVP - Final result (03/24/2004 6:00 PM PST)

Specimen

Narrative	Performed At
CT IVP, 03/24/04: CLINICAL HISTORY: Hematuria. TECHNIQUE: Multiple contiguous axial non-contrast and intravenous contrast enhanced images through the abdomen and pelvis were obtained per CT IVP protocol. Reformations were obtained. FINDINGS: Bibasilar atelectasis. No pleural or pericardial effusion. The heart size is normal. The kidneys are unremarkable without evidence for nephrolithiasis, hydronephrosis or perinephric stranding. No focal filling defects within the collecting system. The entire length of the ureters bilaterally are visualized. The bladder is unremarkable. Two, too small to characterize low attenuation lesions are seen at the dome of the liver. Normal spleen, gallbladder, pancreas, adrenal glands, and GI tract. No free air or free fluid. The perirectal tissues are unremarkable. Benign-appearing sclerotic density is seen at the T10 vertebral body. 3D reconstructions confirm these findings. IMPRESSION: 1. NORMAL KIDNEYS, URETERS AND BLADDER. THE ETIOLOGY OF THE PATIENT'S HEMATURIA IS UNCLEAR. 2. TWO, TOO SMALL TO CHARACTERIZE LOW ATTENUATION LESIONS SEEN AT THE DOME OF THE LIVER. END OF IMPRESSION: I have personally reviewed the images for this examination and agree with the report transcribed above. By: R. Brooke Jeffrey, M.D. on: 03/29/2004 11:05 _____ Acknowledged by KESSLER, ROBERT on 2Apr04 9:50am	RADIOLOGY LAB

DEXA BONE DENSITY CENTRAL (BONE DENSITY ADULT) - Final result (02/12/2004 3:46 PM PST)

Specimen

Narrative	Performed At
CENTER FOR OSTEOPOROSIS Bone Mineral Densitometry by Dual X-ray Absorptiometry (DXA) at SHS ICD9 Code: 733.00 Technique: BMD STD Dev. from STD Dev. from Age- Age-Specific (gms/cm2) Young Adult Specific Normals Percentile Mean (T-Score) (Z-Score) (Average=50%) (L1- L4) Lumbar Spine 1.086 -0.0 +0.3 61.8% ---------- ------- ------- ------- L Total Hip 1.014 -0.1 +0.2 57.9% ---------- ------- ------- ------- The scan was done using an array mode on Hologic QDR 4500 machine. The positioning for the scan was good. Scan artifacts were not	RADIOLOGY LAB

observed.

IMPRESSION: The bone density of the spine and left hip is normal.

Comparisons:
There are no prior studies for comparison.

In 1994, the World Health Organization (WHO) classified the results of a Bone Density Test based on the T-Score (a statistical comparison of the bone density result to the peak mean of young normal controls).

T-Score:
Above -1 SD Normal
Between -1 SD and -2.5 SD Osteopenia (low bone mass)
Lower than -2.5 SD Osteoporosis

Normal Lifetime Risk for Hip Fx/Caucasian Female: Age 50-59 = 6%
Age 60-80 = 13%

For example, the incidence of spine fracture per 1,000 person years for a 64 year old patient is:

+2SD +1SD Mean -1SD -2SD
4 5 9 18 35

Metabolic Panel, Comprehensive (METABOLIC PANEL, COMPREHENSIVE) - Final result (12/31/2003 10:56 AM PST)

Component	Value	Ref Range	Performed At	Pathologist Signature
Sodium, Ser/Plas	143	135 - 145 mEq/L	MISYS LAB	
Potassium, Ser/Plas	4.5	3.5 - 5.5 mEq/L	MISYS LAB	
Chloride, Ser/Plas	105	96 - 109 mEq/L	MISYS LAB	
CO2, Ser/Plas	28	20 - 30 mEq/L	MISYS LAB	
Urea Nitrogen,Ser/Plas	18	<25 mg/dL	MISYS LAB	
Creatinine, Ser/Plas	0.9	<1.2 mg/dL	MISYS LAB	
Glucose, Ser/Plas	92 Comment: The reference range listed above is for a fasting patient. Non-fasting glucose values may be higher.	70 - 110 mg/dL	MISYS LAB	
Anion Gap	10	10 - 20 mEq/L	MISYS LAB	
Calcium, Ser/Plas	9.1	8.5 - 10.5 mg/dL	MISYS LAB	
Total Bilirubin	0.7	<1.4 mg/dL	MISYS LAB	
AST (SGOT), Ser/Plas	18	<50 U/L	MISYS LAB	
ALT (SGPT), Ser/Plas	18	<45 U/L	MISYS LAB	
Alk P'TASE, Total, Ser/Plas	45	<200 U/L	MISYS LAB	
Albumin, Ser/Plas	4.0	>3.5 g/dL	MISYS LAB	
Globulin	2.6	2.3 - 3.5 g/dL	MISYS LAB	
Protein, Total, Ser/Plas	6.6	>6.0 g/dL	MISYS LAB

XR CHEST 2V - Final result (11/26/2003 5:17 PM PST)

Specimen

Narrative	Performed At
CHEST: 11/27/03 COMPARISON: None. CLINICAL DATA: 48 year old male with shortness of breath. FINDINGS: The cardiomediastinal size and configuration are within normal limits. The lungs are clear bilaterally. The bilateral hila, pleura and pulmonary vascularity are within normal limits. Mild degenerative changes at the thoracic spine are noted, with calcification of at least one of the intervertebral discs. IMPRESSION: 1. NO RADIOGRAPHIC EVIDENCE OF AN ACUTE CARDIOPULMONARY PROCESS. END OF IMPRESSION: SUMMARY 1 I have personally reviewed the images for this examination and agree with the report transcribed above. By: Debra Ikeda, M.D. on: 12/03/2003 13:50	RADIOLOGY LAB

Lipid Panel with Direct LDL (LIPID PANEL) - Final result (09/30/2003 8:37 AM PDT)

Component	Value	Ref Range	Performed At	Pathologist Signature
HDL Cholesterol	42 Comment:	>40 mg/dL	MISYS LAB	

	Patients with HDL cholesterol >60 mg/dL may subtract one from their total number of risk factors for coronary heart disease (NCEP Adult Treatment Panel III).		
Direct LDL Chol	141 Comment: <130 mg/dl is the desirable level for patients without coronary heart disease but with >1 risk factor. Patients with coronary heart disease or "CHD-equivalent" (such as diabetes) should target <100 mg/dl. Patients without CHD or with only one risk factor should consider levels between 130-160 mg/dl as "borderline high" and levels >160 mg/dl as "high" (NCEP Adult Treatment Panel III). This result was obtained using direct assay of LDL cholesterol.	<130 mg/dL	MISYS LAB
Cholesterol/HDL Ratio	4.8	<5 ratio	MISYS LAB
Cholesterol, Total	203	<200 mg/dL	MISYS LAB
Triglyceride, Ser/Plas	136	<150 mg/dL	MISYS LAB
Non-HDL Chol, Calc	161 Comment: This calculated result (total cholesterol - HDL cholesterol) is recommended as a secondary target when the LDL cholesterol goal is achieved but triglycerides remain elevated. Patients without coronary heart disease but with >1 risk factors should target <160 mg/dl as the desirable level. Patients with coronary heart disease should target <130 mg/dl as the desirable level (NCEP Adult Treatment Panel III).	<160 mg/dL	MISYS LAB

If you take your Lucy record on a thumb drive to a different doctor, he or she might be able to use his computer to read the file electronically. Your downloaded, machine-readable Personal Health Summary document is in a format called "CDA." If your doctor has a computer that understands CDA, your information is a folder on your thumb drive called **MachineReadable_XDMFormat**. You might need to enter a password before your doctor can use this file.
